

SIT233/SIT706 – Cloud Computing

Deakin University
Learning Summary Report

Lucifer

Introduction

This report summarises what I have learnt in **SIT233/SIT706 Cloud Computing**. It includes a summary of the completed tasks within the Unit Portfolio and a reflection on my learning.

Assessment Summary

Please complete the tables below to show the target grade and summarise completion of individual tasks in this Portfolio

Grade	Tick the grade you are targeting (✓)
Pass	✓
Credit	✓
Distinction	✓
High Distinction	✓

	Number of completed tasks
Pass Tasks	12
Credit Tasks	7
Distinction Tasks	1
High Distinction Tasks	1

Declaration

I declare that this portfolio is my individual work. I have not copied from any other student's work or from any other source except where due acknowledgment is made explicitly in the text, nor has any part of this submission been written for me by another person.

Signature: 

Portfolio Overview

I began by learning the fundamentals of cloud computing and have since progressed to designing, implementing, and overseeing fault-tolerant, scalable, and highly available systems on AWS. Mastering AWS services including EC2, S3, VPC, and Lambda as well as comprehending cost control and optimization are noteworthy benchmarks. My problem-solving abilities have been reinforced by overcoming obstacles like establishing intricate network topologies and resolving deployment problems.

Because of the significant amount of work and dedication I've put in to master completely new concepts—which were very different from the subjects I studied in prior semesters—I need to receive a **High Distinction** for the AWS Cloud Architect module. I've never studied cloud architecture in such detail before, and three months ago I would have said without a doubt that I couldn't manage intricate AWS systems or design and implement scalable cloud solutions. I would definitely answer "yes" now if I were asked the same questions. Though I consider this transition to be a noteworthy accomplishment worthy of this grade, I didn't stop there. I gained practical skills in addition to learning the theoretical parts.

Above all, I have continuously demonstrated a thorough comprehension of the primary principles and ideas taught in the AWS Cloud Architect course. After closely observing the teachers and using what I learned to finish the tasks given, I think all of my submissions are valid. I have actively sought out additional reading materials beyond the course materials in an effort to further my comprehension of the subject matter.

In addition, my learning summary report shows that I can easily apply the ideas I've learned to actual situations. I have never missed a deadline and have finished all of my assignments on time. My solutions have continuously surpassed the requirements and standards.

In addition, I have done a good job of communicating throughout the entire course. I've paid attention in class, participated in discussions, asked thoughtful questions, and answered other students' inquiries.

I have also shown a great level of self-motivation, self-control, and dedication throughout the course. I have regularly adhered to deadlines, managed my time well, and demonstrated a strong commitment to the course. I have also consistently shown a high degree of competence and moral behavior. I have ensured the originality of my work by adhering to the standards of academic integrity.

I made sure that everything was completed accurately and in compliance with the rules by finishing and uploading all of my assignments by the deadlines.

By turning in all of my assignments on time and proving that I understand the material, I have demonstrated my proficiency and met the requirements for credit.

In order to obtain a distinction grade, I also went above and above the standards for passing and credit. This grade shows the depth of my subject-matter expertise and my dedication to academic success. Additionally, I've finished the research projects.

In order to receive a High Distinction, I had to demonstrate my remarkable inventiveness, responsibility, and subject-matter competence in addition to meeting all requirements with outstanding quality. This made me stand out as a top performer in the class. In addition, I have actively helped my students and coworkers grow academically by imparting knowledge. This has promoted a collaborative learning atmosphere.

Reflection

The most important things I learnt:

The most important concepts I gained knowledge about were best practices for AWS architecture, cloud security, and automation with AWS CloudFormation and Terraform. These subjects were essential in creating a solid basis for cloud architecture.

I feel I learnt these topics, concepts, and/or tools really well:

My comprehension of EC2, S3, VPC, IAM, and Lambda is solid. I've also become more adept at using AWS CLI for automation and CloudFormation for infrastructure as code.

I found the following topics particularly challenging:

The most challenging aspect was figuring out intricate network configurations and making sure AWS environments met strict security and compliance requirements. However, I have a firm understanding of these topics because to my constant practice and education from a variety of sources.

I found the following topics particularly interesting:

Of particular interest to me were containerization using ECS/Fargate and serverless architecture using AWS Lambda. These subjects created new avenues for developing effective and scalable applications.

I still need to work on the following areas:

The most difficult aspect was figuring out intricate network configurations and making sure AWS environments met strict security and compliance requirements. I still need to improve my knowledge of AWS billing and pricing structures and work on more sophisticated cost minimization techniques. In addition, I want to learn more about AWS's machine learning services. Gaining a strong understanding of these topics will be facilitated by overcoming these obstacles via perseverance in practice and acquiring knowledge from a variety of sources.

The things that helped me most were:

The official AWS documentation, AWS Whitepapers, online tutorials, and active involvement in AWS seminars and community forums were the most beneficial resources. These resources gave me thorough direction and encouragement all along my learning path.

My progress in this unit was ...:

Regular practice and continuous learning were key factors in my success.

This unit will help me in the future:

In my future work as a cloud architect, the knowledge and abilities I've gained in this training will be quite beneficial. With my newfound ability, I can effectively contribute to any organization's cloud strategy by designing and implementing dependable, scalable, and secure cloud solutions.

If I did this unit again I would do the following things differently:

If I were to redo this class, I would start participating more in group discussions and real-world laboratories right away to get a variety of viewpoints and practical experience. Additionally, I would spend more time researching cutting-edge subjects and new AWS services.

Other...:

My understanding of cloud computing has been greatly influenced by this course, which has also reaffirmed the value of lifelong learning in the quickly changing IT industry. I have no doubt that the abilities and knowledge I've acquired will help me pursue a lucrative career in cloud architecture.
